

Minnesota Poverty Report for Region 1:

Clay, Kittson, Marshall, Norman, Pennington, Polk, Red Lake, and Roseau counties

September 2022

All three poverty rates declined significantly between 2009-12 and 2016-19.

Poverty Rate (2016-19)

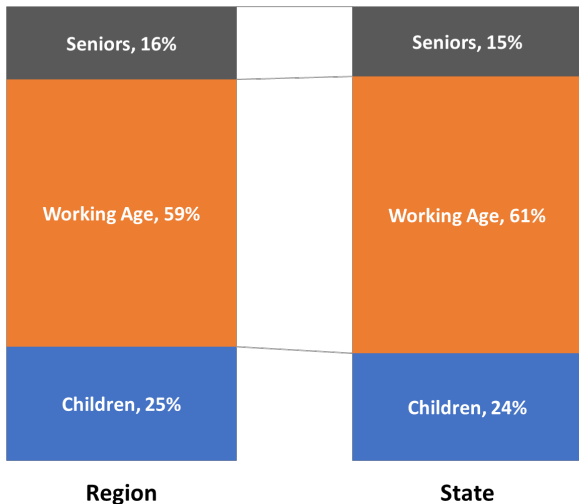

Region and State rate are the same, statistically

Estimated Pop: 144,000

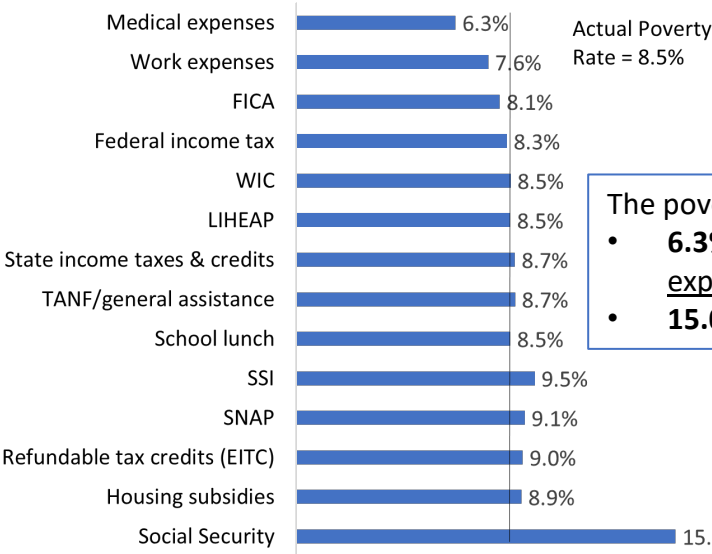

*Significantly lower than 2009-12 ($p < 0.05$).

This region has more seniors and children and fewer working age adults than the state average. Compared to 2009-12, the supplemental poverty rate for all age groups is significantly lower in 2016-2019 ($p < 0.05$).

*Significantly lower than 2009-12 ($p < 0.05$).

This region has more **White** people than the state average. The supplemental poverty rate for **White** people in 2016-19 is 7.3% while the rate for **Hispanic** people is 18.9%. The rate only changed significantly over time for the White group. The sample size for other race groups were too small for reporting poverty rates.

Actual Poverty Rate = 8.5%

*Significantly lower than 2009-12 (p<0.05).

The poverty rate in this region would be:

- **6.3%** if no one had to pay out-of-pocket medical expenses
- **15.0%** if no one received Social Security checks

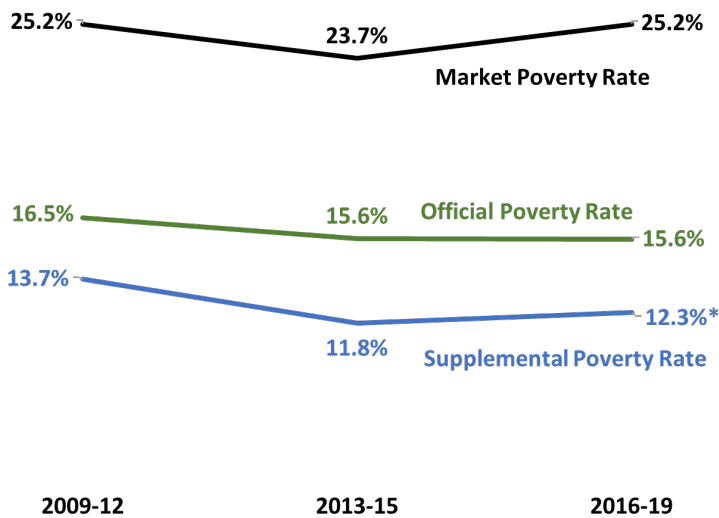

Suggested citation: Fertig, AR (2022) "Poverty Report for Region 1", University of Minnesota, Minneapolis, MN. This research was funded by the Minnesota Community Action Partnership. These statistics were calculated by the author using data from the American Community Survey and the Supplemental Poverty Measure Data between 2009 and 2019 produced by the US Census Bureau.

Definitions: The **market income poverty measure** is intended to capture the poverty rate in the absence of any public assistance benefits to families. It only includes income from labor, investments, retirement savings, and other private sources. The **official poverty measure (OPM)** takes into account some cash public assistance benefits in addition to private income (cash welfare benefits, social security benefits, and supplemental security income benefits). The **supplemental poverty measure (SPM)** aims to capture all possible resources available to a family to cover necessities. It attempts to comprehensively reflect a family's economic circumstances by adding in the value of non-cash public benefits (SNAP, WIC, school lunch program, housing assistance, energy assistance, earned income tax credits and other state and federal tax credits), and subtracting out expenses that are non-discretionary (state and federal taxes paid, payroll taxes (FICA), out-of-pocket medical expenses, and work expenses (childcare and transportation)). The SPM also sets the poverty threshold based on the costs of living (not just food costs) and reflects the fact that some regions of the country are more or less expensive than others.

Minnesota Poverty Report for Region 2:

Becker, Beltrami, Clearwater, Hubbard, Lake of the Woods, and Mahnommen counties

September 2022

The supplemental poverty rate declined significantly between 2009-12 and 2016-19, but the market poverty rate and the official poverty rate did not significantly change over time.

*Significantly different than 2009-12 (p<0.05).

This region has more **Hispanic, Asian and Black** people than the state average. The supplemental poverty rate for **White** people in 2016-19 is 8.6% while the rate for **Native American** people is 39.2%. The rates did not change significantly over time for **Native American, Hispanic, and Other/Multiracial** people. The poverty rates decreased for **Black, Asian and White** people.

*Significantly different than 2009-12 (p<0.05).

The poverty rate in this region would be:

- **10.3%** if no one had to pay out-of-pocket medical expenses
- **19.3%** if no one received Social Security checks

Suggested citation: Fertig, AR (2022) "Poverty Report for Region 12", University of Minnesota, Minneapolis, MN. This research was funded by the Minnesota Community Action Partnership. These statistics were calculated by the author using data from the American Community Survey and the Supplemental Poverty Measure Data between 2009 and 2019 produced by the US Census Bureau.

Definitions: The **market income poverty measure** is intended to capture the poverty rate in the absence of any public assistance benefits to families. It only includes income from labor, investments, retirement savings, and other private sources. The **official poverty measure (OPM)** takes into account some cash public assistance benefits in addition to private income (cash welfare benefits, social security benefits, and supplemental security income benefits). The **supplemental poverty measure (SPM)** aims to capture all possible resources available to a family to cover necessities. It attempts to comprehensively reflect a family's economic circumstances by adding in the value of non-cash public benefits (SNAP, WIC, school lunch program, housing assistance, energy assistance, earned income tax credits and other state and federal tax credits), and subtracting out expenses that are non-discretionary (state and federal taxes paid, payroll taxes (FICA), out-of-pocket medical expenses, and work expenses (childcare and transportation)). The SPM also sets the poverty threshold based on the costs of living (not just food costs) and reflects the fact that some regions of the country are more or less expensive than others.

Minnesota Poverty Report for Region 13:

Hennepin County

September 2022

*Significantly different than 2009-12 (p<0.05).

Poverty Rate (2016-19)

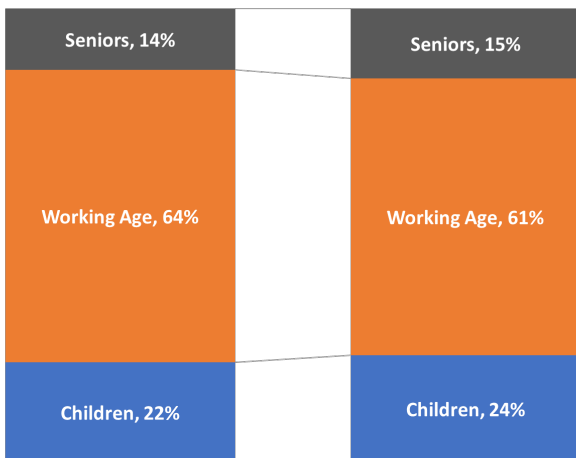

Region State

*Significantly higher than the state rate (p<0.05).

Estimated Pop:
1,228,000

The three poverty rates declined significantly between 2009-12 and 2016-19.

This region has more working age children and fewer children than the state average. Compared to 2009-12, the supplemental poverty rates for working age adults and children are significantly lower in 2016-2019 (p<0.05). The poverty rate for seniors did not change over time.

Region

State

*Significantly different than 2009-12 (p<0.05).

This region has more **Hispanic, Asian and Black** people than the state average. The supplemental poverty rate for **White** people in 2016-19 is 7.4% while the rate for **Native American** people is 24.9%. The rates did not change significantly over time for **Asian** and **White** people. The poverty rate decreased for **Native American, Black, Hispanic, and Other/Multiracial** people over time.

*Significantly different than 2009-12 (p<0.05).

The poverty rate in this region would be:

- **7.9%** if no one had to pay out-of-pocket medical expenses
- **14.8%** if no one received Social Security checks

Suggested citation: Fertig, AR (2022) "Poverty Report for Region 13", University of Minnesota, Minneapolis, MN. This research was funded by the Minnesota Community Action Partnership. These statistics were calculated by the author using data from the American Community Survey and the Supplemental Poverty Measure Data between 2009 and 2019 produced by the US Census Bureau.
